1. Business Overview

ShopNest is an online shopping platform that sells products across multiple categories. As the business continues to grow, managing customer information, products, inventory, orders, payments, shipments, and reviews manually becomes inefficient and error-prone. To improve business operations, the organization requires a centralized database system that stores accurate information and supports smooth day-to-day activities.

2. Business Objectives

The primary objectives of the proposed system are:

- Develop a centralized database for all e-commerce operations.
- Maintain accurate customer information.
- Manage product categories and products efficiently.
- Track inventory and stock availability.
- Process customer orders quickly and accurately.
- Record and monitor payment transactions.
- Track shipments and delivery status.
- Store customer ratings and reviews.
- Reduce data redundancy and manual work.
- Generate business reports for management.
- Improve overall operational efficiency.

3. Business Requirements

The proposed system must support the following business requirements:

Customer Management

- Register new customers.
- Store customer details securely.
- Maintain customer profiles.

Product Management

- Maintain product information.
- Organize products into categories.
- Update product prices and stock quantities.

Supplier Management

- Store supplier information.
- Maintain supplier contact details.

Inventory Management

- Monitor stock availability.
- Update inventory after customer orders.

Order Management

- Create customer orders.
- Maintain order information.
- Store order details including quantity and unit price.

Payment Management

- Record payment information.
- Maintain payment status.
- Track payment history.

Shipment Management

- Record shipment details.
- Track delivery status.
- Maintain delivery address information.

Review Management

- Store customer ratings.
- Maintain customer comments for products.

Reporting

- Generate business reports.
- Provide accurate business information for decision-making.

4. Purpose of Each Core Entity

Entity	Purpose
Customer	Stores customer information such as Customer ID, Name, Email, Mobile Number, Address, and Registration Date.
Category	Stores category details used to organize products.

Product	Stores product information including price, stock quantity, and category.
Supplier	Stores supplier information for product procurement.
Order	Stores customer order information.
Order Details	Stores products included in each order along with quantity and unit price.
Payment	Stores payment details for customer orders.
Shipment	Stores shipment information and delivery status.
Review	Stores customer ratings and comments for purchased products.

5. Stakeholders

Stakeholder	Responsibilities
Customer	Registers, places orders, makes payments, tracks shipments, submits reviews.
Administrator	Manages products, customers, orders, suppliers, inventory, and reports.
Supplier	Supplies products to the company.
Warehouse Staff	Updates stock and prepares products for shipment.
Delivery Staff	Delivers customer orders and updates delivery status.
Finance Team	Verifies and records payments.
Management	Reviews reports and monitors business performance.

6. Functional Requirements

The system shall:

- Register customers.
- Maintain customer information.
- Manage product categories.
- Manage products.
- Maintain supplier records.

- Track inventory.
- Process customer orders.
- Maintain order details.
- Record payments.
- Track shipments.
- Store customer reviews.
- Generate business reports.

7. Non-Functional Requirements

The system should provide:

- Security
- Reliability
- Scalability
- Availability
- High Performance
- Data Integrity
- User-Friendly Interface
- Maintainability
- Backup and Recovery
- Fast Response Time
- Compatibility

8. Project Scope

The system includes the following features:

- Customer registration and profile management.
- Product and category management.
- Supplier management.
- Inventory tracking.
- Customer order processing.
- Order details management.
- Payment recording and tracking.
- Shipment tracking.
- Customer review management.
- Business report generation.
- Centralized database management.

9. Expected Business Benefits

The proposed system will provide:

- Centralized data management.
- Reduced data redundancy.
- Improved inventory management.
- Faster order processing.
- Accurate payment tracking.
- Better shipment monitoring.
- Enhanced customer satisfaction.
- Improved reporting and decision-making.
- Increased operational efficiency.

10. Conclusion

The **ShopNest – E-Commerce Order Management Database System** provides a centralized solution for managing the core operations of an e-commerce business. The proposed database will improve data accuracy, reduce manual work, support efficient order processing, enhance inventory control, and enable better business reporting. This Business Requirement Document serves as the foundation for the Software Requirement Specification (SRS) and the subsequent database design and implementation phases of the project.
